# Rovero Poly Greenhouses

Rovero offer a large range of polythene greenhouse types and sizes.

Our greenhouses ensure the best climatic conditions for your crop and provide protection from extremes of weather. Poly greenhouses offer many benefits for nurseries including high light intensity and excellent ventilation.

## ROVERO TUNNEL

The straight-wall tunnel is popular with growers all over the world. Everyone appreciates its fast, easy construction. The straight walls provide more greenhouse volume, i.e. more room for your plants to grow. The straight walls provide particular benefits when it comes to tall plants or climbers. In addition, it provides better working conditions for you and your workforce.

The straight side wall of this tunnel also allows the possibility to add side ventilation system. You can choose for example a roll-down or a roll-up system.

## ROVERO MULTI

This multi span greenhouse comes at an interesting price and is ideal for any size project.

The tubular version (TU) and the trellis version (TR) of the Multi Rovero are perfect for a wide range of crops. The trellis version (TR) can withstand heavier loads and is suitable for growing hanging crops such as tomatoes, cucumbers, peppers or strawberries.

This greenhouse is designed so that the grower can add various ventilation options such as roll-up or roll-down gable ventilation, and single or double roof ventilation.

## ROVERO EUROPA

The Rovero Europa is at the high end of our range! This wide span poly greenhouse holds a huge volume of air, enabling it to provide a stable climate for any crop. The keenly calculated price to quality ratio and technical highlights make this a very popular greenhouse. Its selling points include the abundance of air and light it provides, the optimal incidence of light and good ridge ventilation.

There are many versions of the Europa greenhouse, which are geared to the relevant climatic conditions. The trellis type can withstand large volumes of snow while the tropical type has a lightweight structure. The construction offers maximum ventilation and can be supplied with single or double sided ridge ventilation

One of the strong points of the Europe greenhouse is the abundance of light and air. The broad roof size ensures an optimum incidence of light. The ridge ventilation ensures maximum ventilation capacity. Of course it is also possible to ventilate via the side fronts.

## ROVERO ROLL-AIR

The Roll-Air greenhouse was developed by Rovero and is in use all over the world. The revolutionary feature of this greenhouse is its fully opening roof. In a matter of seconds your crop can be indoors or outdoors, free of the effects of any shade. The Roll-Air greenhouse is an ideal solution because, in contrast to the standard Venlo cabriolet type greenhouse, it allows the grower to ventilate at all times, even under extreme weather conditions such as strong winds.

The Roll-Air is based on a standard greenhouse construction with integrated aluminium gutters. The unique Roll-Air motor ensures film is rolled up smoothly and the built-in coupling limiter shuts the motor down in case of emergencies. You can also choose between transparent or opaque film.

The rolling cover of the greenhouse can be entirely opened in no-time. Because the film is rolled up compactly towards the ridge, an optimum climate is created within the greenhouse. A revolutionary improvement in the new Roll-Air greenhouse is the ridge ventilation. This ensures that moisture and condensation can be well-drained, also when the greenhouse cover is closed.

Garden centres are another group who appreciate the benefits of this opening roof structure. Whether the conditions are warm and dry, or cold and wet the Roll-Air allows you to control the environment inside your plant sales area.

## ROVERO TWIN-TRIO-QUATRO

Our Rovero Twin Trio Quatro multi-span poly greenhouse provides a fast return on investment due to its speedy construction and attractive price.

Twin Trio Quatro has a solid modular substructure. The basis is a tunnel; two, three or four of which can be erected next to each other. The greenhouse is available with transparent or opaque film and a variety of ventilation systems.

# Glasshouses

Plantmore incorporate the different elements of your glasshouse project such as groundworks, glasshouse type, screening, ventilation, heating, irrigation, and lighting to meet your needs. We take responsibility over the management of the entire project design, construction and the technical installations.

This provides the grower with a clear view of the project from beginning to end. Aspects, such as irrigation, screening and heating systems lie in the hands of our specialist partners.

Plantmore offer two types of glasshouse – Venlo and Widespan.

## VENLO

The Venlo-Type greenhouse is an economical choice and can be perfectly tailored to your requirements. The combination of steel, glass and aluminium makes these greenhouses extremely durable and require low-maintenance. They are supplied with high-tech, modern aluminium roof systems including high quality aluminium gutters with integrated condensation channels. The more popular float glass is used for glazing the structure however tempered glass is also available. Other cladding systems include sandwich panels and polycarbonate glazing. Ventilation is optional in 2 or 3 pane systems.

BAY-WIDTHS	3,20m	4,00m	4,27m	4,80m
POST-HEIGHTS	up to 12,00m			

## WIDE-SPAN

The Wide-Span greenhouse is much larger and heavier than the Venlo type, but gives a lot of space in return. The larger span width results in a more pleasant climate to work in. This type of greenhouse is available with both steel gutters or high-tech aluminium gutters with integrated condensation channels. Sliding doors and roll-over doors can be sized and fitted to suit. Cladding systems include options with sandwich panels and polycarbonate glazing, float glass or tempered glass.

BAY-WIDTHS	up to 16,00m
POST-HEIGHTS	up to 12,00m

# Side Ventilation

## ROLLING SCREENS

---

Rolling screens are used in the front and side gables of a greenhouse as a method of controlling the climate inside. Rolling screens consist of a roll tube and motors or hand winch which winds the screen to open and close.

Plantmore supply complete rolling systems which can either be opened from the top down or from the bottom up and are available for newly built and existing greenhouses.

## RACK AND PINION SYSTEMS

---

Storm-proof and low maintenance due to the electric motors driving the rack and pinion system. Guaranteed long lifetime for all components because the ventilation system in the outside walls moves up and down as one unit.

# Screening Systems

Whether it's an energy saving system, a blackout system, rolling screens or horizontal screens we always work together with our partners to provide a reliable system consisting of the

best available components. Because we know that a screen installation is an absolutely essential part of your business we give this aspect the attention that it deserves.

## ENERGY SAVING SCREENS

Installing an energy saving screen allows the grower to control their energy costs and indoor climate. A wired system optimizes the light conditions and is completely flexible while the screen can be folded away to occupy a

minimum amount of space. The screening is UV stable and remains clean and effective for a long time. Plantmore can advise you in selecting the perfect screening for your situation.

## ROOF ROLL SCREENS

Roof-roll screens are specially designed widespan-greenhouses. The screens are positioned just below the roof of the greenhouse creating the desired climate, without restricting

your ventilation possibilities. There are also decorative versions available for purposes like garden centres or public spaces with the requirement to make the room more attractive.

OTHER POSSIBILITIES		
Blackout Screens	Rolling Screens	Insect netting

# Air Movement

## GREENHOUSE RECIRCULATION FANS

### MULTIFAN RECIRCULATION FAN

---

The use of Multifans for air circulation is a reliable solution to control the climate inside the greenhouse. Air circulation can prevent the existence of cold or warm zones in the greenhouse which results in an optimal control of the greenhouse climate. The units are suitable for all year round ventilation and movement of air within greenhouses. In the winter time when the greenhouse windows are hardly opened, air circulation will minimize differences in temperature and humidity on different places inside the greenhouse. This will stimulate the growth of the crops, decreases moisture related diseases, and prevents big differences in crop development.

- Perfect air distribution by means of large aerodynamic inlet radius.
- Double wire guard in accordance with CE-Standards/OSHA
- 3 years warranty
- Easy to mount / remove wireguard
- Low noise levels

Multifan Recirculation Fan

V-Flo Fan

## V-FLO FAN

---

Because of several energy technical improvements in modern greenhouses and more intensive cultivation methods, the necessity of controlling humidity at crop level increases. With the V-FloFan, the grower has the opportunity to reduce the negative impacts, due to humidity, in a simple and energy efficient way. The vertical and horizontal airflows result into an active microclimate on crop level.

### THE V-FLOFAN IS A PREREQUISITE FOR:

- Optimal air distribution in the greenhouse with the purpose to create an optimal climate and crop
- To control the humidity level on crop level
- Creating an active microclimate on the crop level and leaves
- Constant low airspeed in the crop overall
- Reduction of the energy costs through vertical airflow with assimilation lighting

### THE V-FLOFAN, A RECIRCULATION FAN WITH VERY UNIQUE FEATURES:

- An optimal vertical airflow through a special aerodynamic shaped conical outlet to guide the airflow
- The V-FloFan is applicable for several cultivation systems and crops through a conical outlet to guide the airflow
- Reduced number of fans per surface-unit in comparison to similar systems
- Energy efficient motors/fans, developed and produced according to future directives

## MULTIFAN130

---

Through the aerodynamic design of the Multifan 130, Vostermans Ventilation can offer the market a fan with high air vol (litre)umes (26,700 CFM at 0 Pa) with a very low power consumption. Tunnel ventilated houses demand higher product performances and higher quantities of fresh air at low cost.

### ADVANTAGES

Designed to allow minimal air losses

- The blades are especially 3-dimensionally shaped to provide maximum air performance of the fan
- Low noise level
- High vol (litre)ume airflow
- Durable and reliable design
- Materials resistant against aggressive climates
- Easy to clean for optimal hygiene
- Available with cone fan and with shutter on the inside for increased airflow capacity

# Heating

Plantmore have teamed up with Thermobile UK to provide a large range of space heaters suitable for heating glasshouses and polytunnels. Space heaters are a cost effective and low maintenance method of securing frost protection for your crop during the winter months. Manufactured according to ISO 9001

they are extensively tested to ensure every product is of the highest quality. All Thermobile heaters comply with the most stringent European standards and all models carry the mandatory CE marking and are also in accordance with Technical Rules (formerly GOST) certification.

# TA/TAS DIRECT OIL FIRED HEATERS

## WORKING PRINCIPLE

- Direct heat with 100% efficiency.
- Fixed outlet temperature circa 450 °C.
- Fast temperature rise.
- High pressure pump for diesel or paraffin.
- 1-Way pipe system prevents fuel disturbance.
- TA-models function with photocell flame control.

## FEATURES

- Durable phosphated body parts with powder coating.
- Very mobile, economic in use, reliable.
- Safe cool outside housing.
- Tank for 16 hours burning duration.
- Exchangeable components.
- High pressure pump with 1-way pipe system. Conversion kit to 2-way pipe system available for connection to bulk tank (max. length 50 m/height 3 m, depends on diameter of pipe).
- Room ventilation is required.
- TA models with burner relay, photocell flame control and thermostat connection.

## GA DIRECT PROPANE GAS FIRED

---

### WORKING PRINCIPLE

- Direct heat with 100% efficiency.
- Adjustable capacity.
- Adjustable outlet temperature between 80-185 °C (1 m).
- Clean burner because of fresh air connection (GA 60 E / GA 85 E en GA 110 E).

### FEATURES

- All GA models come with burner relay, ionization flame protection, thermostat connector and hose breakage protection.
- Clean combustion, easy to maintain.
- Full humidity and dust proof control panel. (Except GA 25 E)
- Removable exterior cover for service.
- Gas valves with built-in filter. Twin gas valves for safety.
- GA models (except the GA 25 E) can both blow horizontally and vertically (up or down) near a drying system.

## TAS800E HEATERS

---

### WORKING PRINCIPLE

- Direct heat with 100% efficiency.
- Fixed outlet temperature circa 60-100 °C.
- Large air throw.
- Clean burner because of fresh air connection.
- Fan for optimum combustion air.
- High pressure pump for diesel or paraffin.

### FEATURES

- Standard with fresh air intake to the burner.
- Good heat distribution, optimum combustion.
- Full humidity and dust proof control panel.
- Easy access for cleaning.
- Durable phosphated body parts with stainless steel casing.
- Thermostat connection.
- Electric switch components in full humidity and dust proof control panel (IP 54).
- With burner relay, photocell flame control and thermostat connection.
- High pressure pump with 2-way pipe system for connection to bulk tank (max. length 50 m/height 3 m, depends on diameter of pipe).
- Room ventilation is required.

# Plastic Films

Plantmore use Solar EVA thermal, anti-condensation plastic films which are available in two thicknesses, 180 micron and 200 micron. The light transmission percentage for our films is between 90% and 92% depending on the type of film. Which type of film to use is discussed thoroughly with the customer. When choosing film we consider the crop and other important requirements, so that the right choice of film can be made to guarantee a perfect growth.

## STRENGTH AND DURABILITY

Solar EVA films are co-extruded in 3 layers giving the film superior strength compared to standard UV films. It is very easy to tension on the greenhouses due to its elastic structure and remains tensioned and rinkle free for years.

## THERMICITY

Low thermicity is obtained by adding mineral fillers and/or the use of EVA. These substances act as a barrier to the long wavelength infrared radiation and prevent too much cooling down at night. Infrared rays causing heat loss during the night are reflected back inside the greenhouse resulting in higher night time temperatures, hence increased plant activity and subsequently higher yields.

## ANTI-CONDENSATION

Adding special additives to the film causes the condensation to spread across the film and drain off along the sides. This prevents the plants and flowers from damaging drops coming off the inner surface of the film.

## DIFFUSE FILMS

Diffuse light is very important for plants. The diffusion of the light ensures that there are no cast shadows, the light is more uniform and the bottom leaves also get sufficient light. The more diffuse a film the lower the leaf temperature thus preventing symptoms of direct burning on leaves and flowers. Solar EVA 5 HD film offers 75% diffused light.

We can also supply other films, such as Net film, Propagation film and Flame Retardant films on request.

FILM	THICKNESSES	LIGHT TRANSMISSION	THERMIC ANTI-FOG	DIFFUSED LIGHT	GUARANTEE
Solar EVA 4	180 micron	90.00%	Yes	–	4yrs
Solar EVA 5	200 micron	90.00%	Yes	–	5yrs
Solar EVA 5 HD	200 micron	92.00%	Yes	75.00%	5yrs

## POPPELMANN TEKU

Pöppelmann TEKU set the industry standard with their extensive range of plant pots and trays. All Pöppelmann TEKU® pots and trays come with the promise of fast growth, healthy flowers, excellent unstacking, safe attachment of labels, safe handling and the extensive use of recycled material. Often, it is such details which make large differences.

### ADVANTAGES (POTS)

- Very low failure rates – Roots are not adversely affected or damaged by exposure to light.
- Easy denesting from the potting machine – The facet rim and high degree of lateral stability ensure easy denesting from the stack in the pot magazine.
- Better handling – U-Rim for modern spacing-machine applications. Deburred raw edge is especially user-friendly and reduces the risk of injury
- Maximum stability – With no mounting feet, the pots are more stable on conveyor belts.

### ADVANTAGES (TRAYS)

- Even watering – Precisely punched overflow holes combined with water channels ensure even watering during transport (standard version).
- Better handling – The stable soft edge with deburred raw edge is especially user-friendly and reduces the risk of injury.
- Packaging – White stretch film covers protect against UV-damage. Pallets can also be stored outdoors when it is wet and windy. Anti-slip interlayers ensure greater stability during transport. The innovative sleeves also offer advantages for handling
- Excellent presentation due to good visibility of printed and coloured pots
- Trays are available with open base, drainage holes or closed base.

## TEKU FLEX + COLOUR PRINTING

Whether its printing your company logo, barcodes or displaying a unique design to enhance the value of your product in todays constantly changing market place. TEKU FLEK+ is the ideal solution for you.

### ADVANTAGES

- Flexible print runs
- Intensive colours
- Photo printing on all pot colours
- Lacquer finish available
- Almost unlimited shades

THE PÖPPELMANN EFFECT:

# CLOSED MATERIAL LOOP

We are doing it.  
More resource-saving.

## RESOURCE-SAVING PLANT POTS MADE FROM RECYCLED PLASTICS.

Environmental and climate protection becomes more and more important for the end consumer. And the topic of resource conservation is important to us as well. Therefore the plastics used for our plant pots in the “Recycling Blue” colour come directly out of the recycling bin and returns there as well. This allows for a closed raw material cycle.

We call this initiative PÖPPELMAN blue®.

Post-consumer recycled material (PCR) out of the recycling bin

Colour

Filler material

## ADVANTAGES FROM WHICH NOT ONLY YOU BENEFIT.

- ⊕ The raw material cycle is closed (closed loop)
- ⊕ The use of recycled plastics conserves fossil resources
- ⊕ Recycling-friendly design (100% recyclable)
- ⊕ The demand for environmentally friendly and resource-saving packaging is growing rapidly

## THIS IS HOW WE CLOSE THE RAW MATERIAL CYCLE.

Plastics is a valuable raw material. Currently, only about half of the plastic from the packaging waste is recycled in Germany. We want to increase this ratio and actively contribute to closing the raw material cycle.

Plant pots in the “Recycling Blue” colour are designed in such a way that the material can be reliably identified in waste sorting. These can be used for the extraction of new Pöppelmann PCR granules, which are completely extracted from the recycling bin.

# Crop Protection

## GROUND COVER

Our ground cover fabrics are UV stabilised for long term exposure to the sun and are available in a selection of weights, widths and lengths. Its woven construction combines weed suppression with excellent water permeability. Its easy to install and maintain and can handle both pedestrian and machine traffic.

**COLOURS AVAILABLE**      Black – General landscaping and nursery beds.  
   White – Early ripening fruits and salad crops.

## AGRO COVER

This product is designed primarily for frost protection although its quiet often used to bring forward spring crops. It is also ideal for covering seedbeds and flower bulbs. Agrocover is a knitted thermal polythene contact crop cover which can be used as a fleece suitable for a wide range of crops. It's biggest advantage is that it is re usable year after year so saving on recycling costs. It allows rain or irrigation to enter through to the crop and doesn't puddle like a non woven fleece. It also allows the passage of air both into and out of the cover when it is used as a contact fleece which reduces damp stale air which gets trapped inside a spun bonded fleece and gives ideal conditions for fungal diseases to spread.

Spun bonded fleeces retain heat by trapping a layer of air underneath the cover. This relies upon you having put the fleece on early enough in the day to enable the sun to raise the temperature. Because Agrocover is made from thermal grade polythene it retains long wave infra red in the cover at night, just as a thermalpoly tunnel cover does, giving about 2 deg C frost protection.

Unlike spun bonded fleeces Agrocover does not become weaker when it is wet so animals walking on it don't break it.

## MONONET WIND/SHADE NETTING

---

Mononet netting is tough and extremely durable. It is designed to reduce wind speeds by over 50% and offer shading of up to 75%. It is available in sizes from 1mtr to 4mtr wide and lengths of 50mtr to 200mtr.

More commonly you will see it on greenhouses in its attractive green colour but its also available in black. For added strength the edges are double lock - stitched and each roll has button hole eyelets in the top middle and bottom. Mononet gives superior performance in all weather conditions.

## INSECT NETTING

---

Plantmore insect netting is ideal for producers of basic material or propagation material and of organic products. The lightweight UV inhibited netting keeps out insects preventing damage to the crop and the spread of bacterial diseases. The netting is also used in ridge ventilation systems in poly greenhouses. Insect netting is made from high quality, transparent material and guarantees maximum air permeability as well as optimal shade. You can choose from a variety of mesh widths and weaves.

# Erfgoed Floors

Plantmore wish to help you create the perfect growing conditions for your crop. In association with ErfGoed we can provide a floor on which you will produce a vigorous, strong and uniform crop. All plants receive the same amount of water for the same length of time. What's more, the ErfGoedFloor is the most sustainable base for growing, in particular since water and fertilizer can be reused.

The ErfGoedFloor is the ideal base for every crop. The floor consists of a layer of porous stone that can be filled with water. As soon as the layer is full, the water rises everywhere simultaneously. Once the crop has absorbed sufficient water, the floor empties once again.

All plants are irrigated uniformly. This ensures a healthy and resilient crop with good root growth. The vertical drainage and the anti-condensation mat allow optimal climate control.

## NO DAMP ROOTS

The absorption ability of the ErfGoedFloor is unique. After irrigation and after cooling the floor with water, the water disappears immediately. This means that the roots and pot don't remain wet unnecessarily. What's more, there is no risk of puddles forming.

## SUSTAINABLE SOLUTION

The ErfGoedFloor is the most sustainable growing floor for your crop. A high-quality membrane prevents emissions to the subsoil. It's not necessary to heat the floor in order to keep it dry, and you can reuse fertilizers. The ErfGoedFloor also allows better management of moisture. Water from the pot flows directly into the floor. This ensures lower disease pressure and uniform growth.

### ADVANTAGES

- Less chance of disease
- Less use of pesticides and fertilizers
- Better reuse of water
